WORK EXPERIENCE

Sep 2024 - Present: **Member of Technical Staff, Edison Scientific**, Palo Alto, CA

Building the AI platform for science, developing agent-driven workflows that accelerate research and drug discovery.

Nov 2023 - Sep 2024: **Co-Founder/CTO, Vivify.ai inc**, SF, CA

Building an AI-powered communication platform that accelerates designers' workflows by enhancing multimodal collaboration and reducing time-to-market, while architecting cutting-edge AI copilots and autopilots that simplify processes, capture interaction trajectories, and pave the way for training multimodal interaction models.

January 2020 - October 2023: **SVP of AI, Sharecare (Acquired doc.ai)**, Palo Alto, CA

Promoted to SVP following Sharecare's acquisition of doc.ai, tasked with leading and scaling AI initiatives across the newly merged organization. Grew from leading a specialized R&D team to setting the AI strategy for the public company.

SVP of AI (February 2022 - October 2023):

- Drove the integration of Generative AI into Sharecare's core products, including the WeCare travel application.
- Led the development of an AI Nudges recommendation system to improve patient engagement and treatment adherence.
- Scaled ML operations to transition novel vocal and visual biomarkers from research to clinical use.
- Deployed edge ML models for real-world applications, including on-device medication identification.

Director of AI Engineering, doc.ai (October 2020 - February 2022):

- Spearheaded the development of a scalable healthcare data and ML platform, enabling the rapid and secure deployment of models to optimize patient care and manage costs.

Senior Principal Engineer, doc.ai (January 2020 - October 2020):

- Led the Privacy Preserving Group to build a federated learning framework, achieving the first-ever TensorFlow model training on mobile devices outside of Google and open-sourcing Tensor/IO.

March 2016 - January 2020: **Sr. Research Software Engineer Tech Lead, Authess**, Boston, MA (**Acquired by Elsevier in Jan 2020**)

As a Founding Engineer at Authess, I drove the development of an open-ended assessment platform, leveraging deep learning techniques to enhance employers' ability to pinpoint job ready candidates beyond mere test proficiency.

June 2011 - August 2011: **Engineering Intern, Google**, Mountain View, CA

Interned with the Google search quality team. Verified learning-to-rank challenge-winning algorithms' results, performed sensitivity analyses, and investigated new ways to perform feature selection to improve performance.

June 2009 - August 2009: **Engineering Intern, Google**, New York, NY

Interned with the Google Finance team. Improved the ranking of financial news articles shown on stock price charts, analyzed stock price fluctuations and price changes related to the market, identified articles that matched the discovered trends, and boosted their ranking score.

September 2000 - May 2004: **Software Developer, Dalet Digital Media Systems**, Beer-Sheva

Lead developer of Dalet Distributed Services (DDS), a framework for intelligent agents residing in the network, allowing users to interact and manipulate sets of agents to perform specific tasks. I helped generate innovative solutions, coached junior programmers, and successfully implemented customized versions of the product.

EDUCATION

2004-2017 **Massachusetts Institute of Technology**, Cambridge, MA

Ph.D. Candidate in Computer Science, ABD (All but Defense)

Projects

- Natural language dialog system for Web services: automatic discovery of the underlying structure and API of Web Services; researched and prototyped models that learned to map user queries to a corresponding series of actions.
- Wrapper generation: automatic wrapper induction and information extraction from Structured and Semi-Structured websites for Q&A systems.
- Online lecture processing: application of machine learning techniques to align, segment and summarize spoken language from lecture domain.

M.Sc. in Computer Science and Artificial Intelligence, May 2007.

Wrapster: Semi-Automatic Wrapper Generation for Semi-Structured Websites

Advisor: Boris Katz

1998-2001 **Ben Gurion University - Department of Computer Science**, Beer-Sheva

B.Sc. Dual Degree in Computer Science and Mathematics

Received "Best to Industry" scholarship (sponsored by private companies), which enabled me to gain professional experience. For my final research project, I designed and developed a constraint-based web publishing portal for Dalet Company under the supervision of Prof. Michael Elhadad. The portal was deployed on the France 2 TV website.

TEACHING EXPERIENCE

Teaching Assistant

- ☐ Machine Learning (6.867): Fall 2009 and 2010.
- ☐ Elements of Software Construction (6.005): Spring 2010, 2011 and Fall 2014.
- ☐ Natural Language Processing (6.863): Spring 2009.
- ☐ Computer Graphics (6.837): Fall 2013.

NATURAL LANGUAGES

- ☐ Native speaker of Arabic and Hebrew.
- ☐ Fluency in French and Spanish.

SELECTED PAPERS AND PROPOSALS

PuPill - A Model For Identifying Medications From Images Of Packaging (ICML 2022)

Natural Language Assistant for Routine Web Tasks (Ph.D. Thesis proposal)

Answering English Questions using Foreign-Language, Semi-Structured Sources (ICSC 2007)

Wrapster: Semi-Automatic Wrapper Generation for Semi-Structured Websites (Master thesis)
(Short version, not published)
